Who We Are.

Introduction

PT Difa Jasindo (Diffa) is a limited liability company specializing as a consultant in the field of natural resource management and development.

Established in response to the transformation of the relationship between natural resources and humans, which often leads to environmental degradation and a decline in the quality of life. Diffa is committed to assisting stakeholders in natural resources, human resources, and the environment, including communities, businesses, governments, and other relevant parties, in efforts to achieve higher economic, socio-cultural, and environmental sustainability.

Mission & Vision.

MISSION

- **Optimization of Natural Resources:** DIFFA is committed to supporting its clients in exploring and exploiting natural resources efficiently and responsibly. With an innovative and sustainable approach, DIFFA will ensure that this process is conducted in compliance with environmental standards and regulations.
- **Strategic Investment Guidance:** DIFFA will provide strategic guidance to clients in determining the most profitable and sustainable investment directions. This includes market analysis, financial planning, and risk evaluation to ensure wise investment decisions and the maximization of long-term profits.
- **Technology Development:** DIFFA will assist clients in identifying and implementing the latest relevant technologies for their industry. This includes the development and integration of technologies to enhance operational efficiency, productivity, and product or service innovation.
- **Harmonious Institutional Changes:** DIFFA will offer consulting services on the necessary institutional changes to achieve the company's strategic objectives. This includes organizational restructuring, human resource development, and cultural adjustment to align with the long-term vision and support sustainability and societal well-being.

VISION

DIFFA envisions becoming a trusted and leading company in ensuring the transformation process in the exploration and exploitation of natural resources, investment direction, technology development orientation, and institutional changes in a harmonious state to sustainably meet the needs of a prosperous society.

Performance Foundation.

The policies and operations of Diffa are based on the following principles:

- **Gratitude to God Almighty:** Recognizing and appreciating the gifts and benefits of natural resources for human life and the surrounding living beings.
- **Logical and Wise Attitudes:** Embracing rational and prudent thinking that aligns with welfare and sustainability.
- **Synergy of Cooperation:** Promoting collaboration within a holistically integrated framework.
- **Development of Science and Technology:** Incorporating advancements in science and technology at every step to determine optimal solutions.
- **Professional Services:** Delivering professional, competitive, and precise services that meet stakeholders' needs.

Experiences.

Some consulting projects previously undertaken by Diffa:

- **Sustainable Natural Resource Management Strategy:** Developing a comprehensive plan for sustainable exploration and utilization of natural resources.
- **Advanced Remote Sensing and GIS Integration for Environmental Monitoring:** Implementing cutting-edge remote sensing and GIS technology for enhanced environmental monitoring and management.
- **Crisis Management and Contingency Planning for Natural Resource Companies:** Designing robust crisis management and contingency planning frameworks to mitigate risks and handle emergencies effectively.
- **Investment Planning and Risk Analysis in the Natural Resource Sector:** Providing strategic investment guidance and risk analysis tailored to the natural resource industry.
- **Social Impact Assessment and Community Engagement Programs:** Conducting thorough social impact assessments and developing community engagement initiatives to foster positive relationships with stakeholders.
- **Technological Innovation and Implementation for Resource Efficiency:** Identifying and integrating innovative technologies to improve the efficiency and sustainability of natural resource operations.

What We Do.

1. What do Consultants do based on service areas?

- Environment & Forestry
- Agriculture & Plantation
- Fisheries & Marine
- Strategy development
- Mining & Energy
- Limited Construction

2. What does a Consultant do based on service?

- Management and planning.
- Surveying and mapping integrated with remote sensing technology and geographic information systems (GIS).
- Environmental impact management and monitoring analysis.
- Social impact management and monitoring analysis.
- Licensing and legal permits.
- Evaluation and assessment.
- Marketing planning.
- Modeling.
- Research and certification process support.

3. What does a Consultant do based on objectives?

Economic and investment, social and cultural, biophysical and conservation as well as public policy and institutions

Scope of Work.

1. Economic and Investment Analysis

- This involves evaluating the investment potential in natural resource utilization, ensuring environmental sustainability, and ensuring that benefits are widely shared among the community.

2. Social and Cultural Analysis

- This analyzes the social and cultural impacts of natural resource utilization activities, ensuring compatibility with local values, and involving the community in decision-making processes.

3. Biophysical and Biodiversity Analysis

- This analyzes environmental conditions and biodiversity, ensuring that natural resource utilization activities are sustainable.

4. Legal and Formal Analysis

- This analyzes the legal framework and policies governing natural resource utilization, ensuring legal certainty, and supporting good governance.

Primary Objectives.

1. Developing policy recommendations

- Formulating policy recommendations that can support sustainable and equitable natural resource utilization.

2. Ensuring accountability

- Ensuring that all natural resource utilization activities can be accounted for socially, economically, and environmentally.

3. Improving community welfare

- Ensuring that natural resource utilization can improve the overall welfare of the community.
